

Image Processing

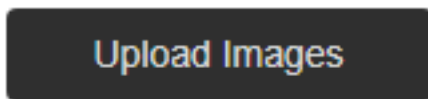

Creating Animated GIF

Creating Animated GIF without downloading / installing any application.

This is the easiest method of creating a GIF from a series of images. You need to be online during the process.

1. Collect all images to be used in the animation in a folder. Finalise the sequence and rename images or note down the sequence to ensure proper flow.
2. Open any of the following sites. We do not endorse any of these. You can use other sites by searching.
 - gifmaker.me (Opens in new window)
 - gifcreator.me (Opens in new window)
3. Upload all images

Select multiple images:

Hold down Ctrl or Command to select multiple images.

You can upload up to 300 JPG, PNG or GIF images.

4. Configure variables as desired.

Image Processing

Control Panel:

Preview

Canvas size:

%: x px

Animation speed:

milliseconds

Repeat times(0 = infinite loop):

times

Music URL(optional, YouTube only):

(begin time in seconds)

5. Download the animated GIF and use it as you want.
