Connecting to FTP Service on S Series Servers

We recommend using CoreFTP which can be downloaded for free from <http://www.coreftp.com/download.html>

Use the following settings. **Take Special care to UNCHECK PASV**

The image shows a screenshot of the CoreFTP configuration dialog box. The fields are filled with the following information:

- Site Name: New_Site
- Host / IP / URL: d10.medialab.in
- Username: abcd
- Password: (masked with dots)
- Port: 21
- Timeout: 60
- Retries: 2
- Connection: FTP
- SSL Options: SSL Listings (checked), SSL Transfer (checked), Clear (CCC) (unchecked), OpenSSL (unchecked), Windows SSL (unchecked), High crypto (unchecked)

The **PASV** checkbox is highlighted with a red box and is unchecked. Other checkboxes include Anonymous, Don't save password, and Retry On, all of which are also unchecked. The Use Proxy checkbox is also unchecked. At the bottom, there are three buttons: Connect, Connect Manager, and Close.

Click connect and you will be connected to the root directory of your website.

Unique solution ID: #1039
