URL automatically changes to Domain_Name/cgi-sys/defaultwebpage.cgi

On typing the domain name in the address bar, it changes to domain name /cgi-sys/defaultwebpage.cgi

*This solution works with Google ***Chrome***

This happens when a new hosting is setup on a server. The issue is temporary and goes away in a few hours. However, if you want to fix it immediately, follow the steps below.

1. Open Chrome
2. Press **Ctrl + Shift + i**
3. Click on **Network**
4. Check **Disable cache**
5. Type the domain name in the address bar and press **enter**. The issue will be fixed.
