

Domains & Hostings

Adding a new website (Domain or Subdomain)

1. Go to Files folder and navigate to wwwroot

2. Create folder for the new website or subdomain. A folder can be created in root or inside another folder.

3. Upload the contents in the newly created folder. (Can be done later too)

4. Go to **Website** Link and add Website

Domains & Hostings

The screenshot shows a dark sidebar on the left with a navigation menu. The 'Website' option is highlighted in white and has a red arrow pointing to it. The main content area is light gray and shows a 'PHP Project' tab selected. Below the tabs, there are three buttons: 'Add site' (green), 'Default Page', and 'Default Website'. A table below lists sites with columns for 'Site name', 'Status', and 'Back'. Two sites are listed: 'ashoksquest.org' and 'python.ashoksqu...'. Both are 'Running' with a green play icon. A red arrow points from the 'Add site' button to the first row of the table. At the bottom, there is a 'Please choose' dropdown and an 'Execute' button.

<input type="checkbox"/>	Site name ▲	Status ▼	Back
<input type="checkbox"/>	ashoksquest.org	Running ▶	Not
<input type="checkbox"/>	python.ashoksqu...	Running ▶	Not

5. Enter the website URL and click the browse button to select Website Path.
If the directory is not created using steps 1 & 2 above, then simply type a suitable name and it will be created by the system

Domains & Hostings

Add site - Support batch site building

Create site	Batch create	Wordpress deploy
Domain name	<input type="text" value="bhc.ashoksquest.org"/>	
Description	<input type="text" value="bhc_ashoksquest_org"/>	
Website Path	<input type="text" value="/www/wwwroot/bhc.ashoksquest.org"/>	
FTP	<input type="text" value="Not create"/>	FTP is not installed, click Install
Database	<input type="text" value="Not create"/>	
PHP version	<input type="text" value="PHP-74"/>	
Site category	<input type="text" value="Default category"/>	
SSL	<input type="checkbox"/> Apply for SSL	<input type="checkbox"/> HTTP redirect to HTTPS

If you need to apply for SSL, please make sure that the domain name has added A record resolution for the domain name

6. select the directory and proceed to add the website

Domains & Hostings

Select directory

Return Current path: /www/wwwroot/

File name	Modification time	Permission	Owner
<input type="checkbox"/> ashoksquest.org	2023/05/23 06:26:10	755	www
<input checked="" type="checkbox"/> bangaloreharmonicaccl...	2020/01/02 13:26:19	755	www
<input type="checkbox"/> default	2023/02/11 13:14:19	755	www
